

Aptapp: An In-app Assistant Providing Helpful Guidance on WeChat Functionality

Sai Wei

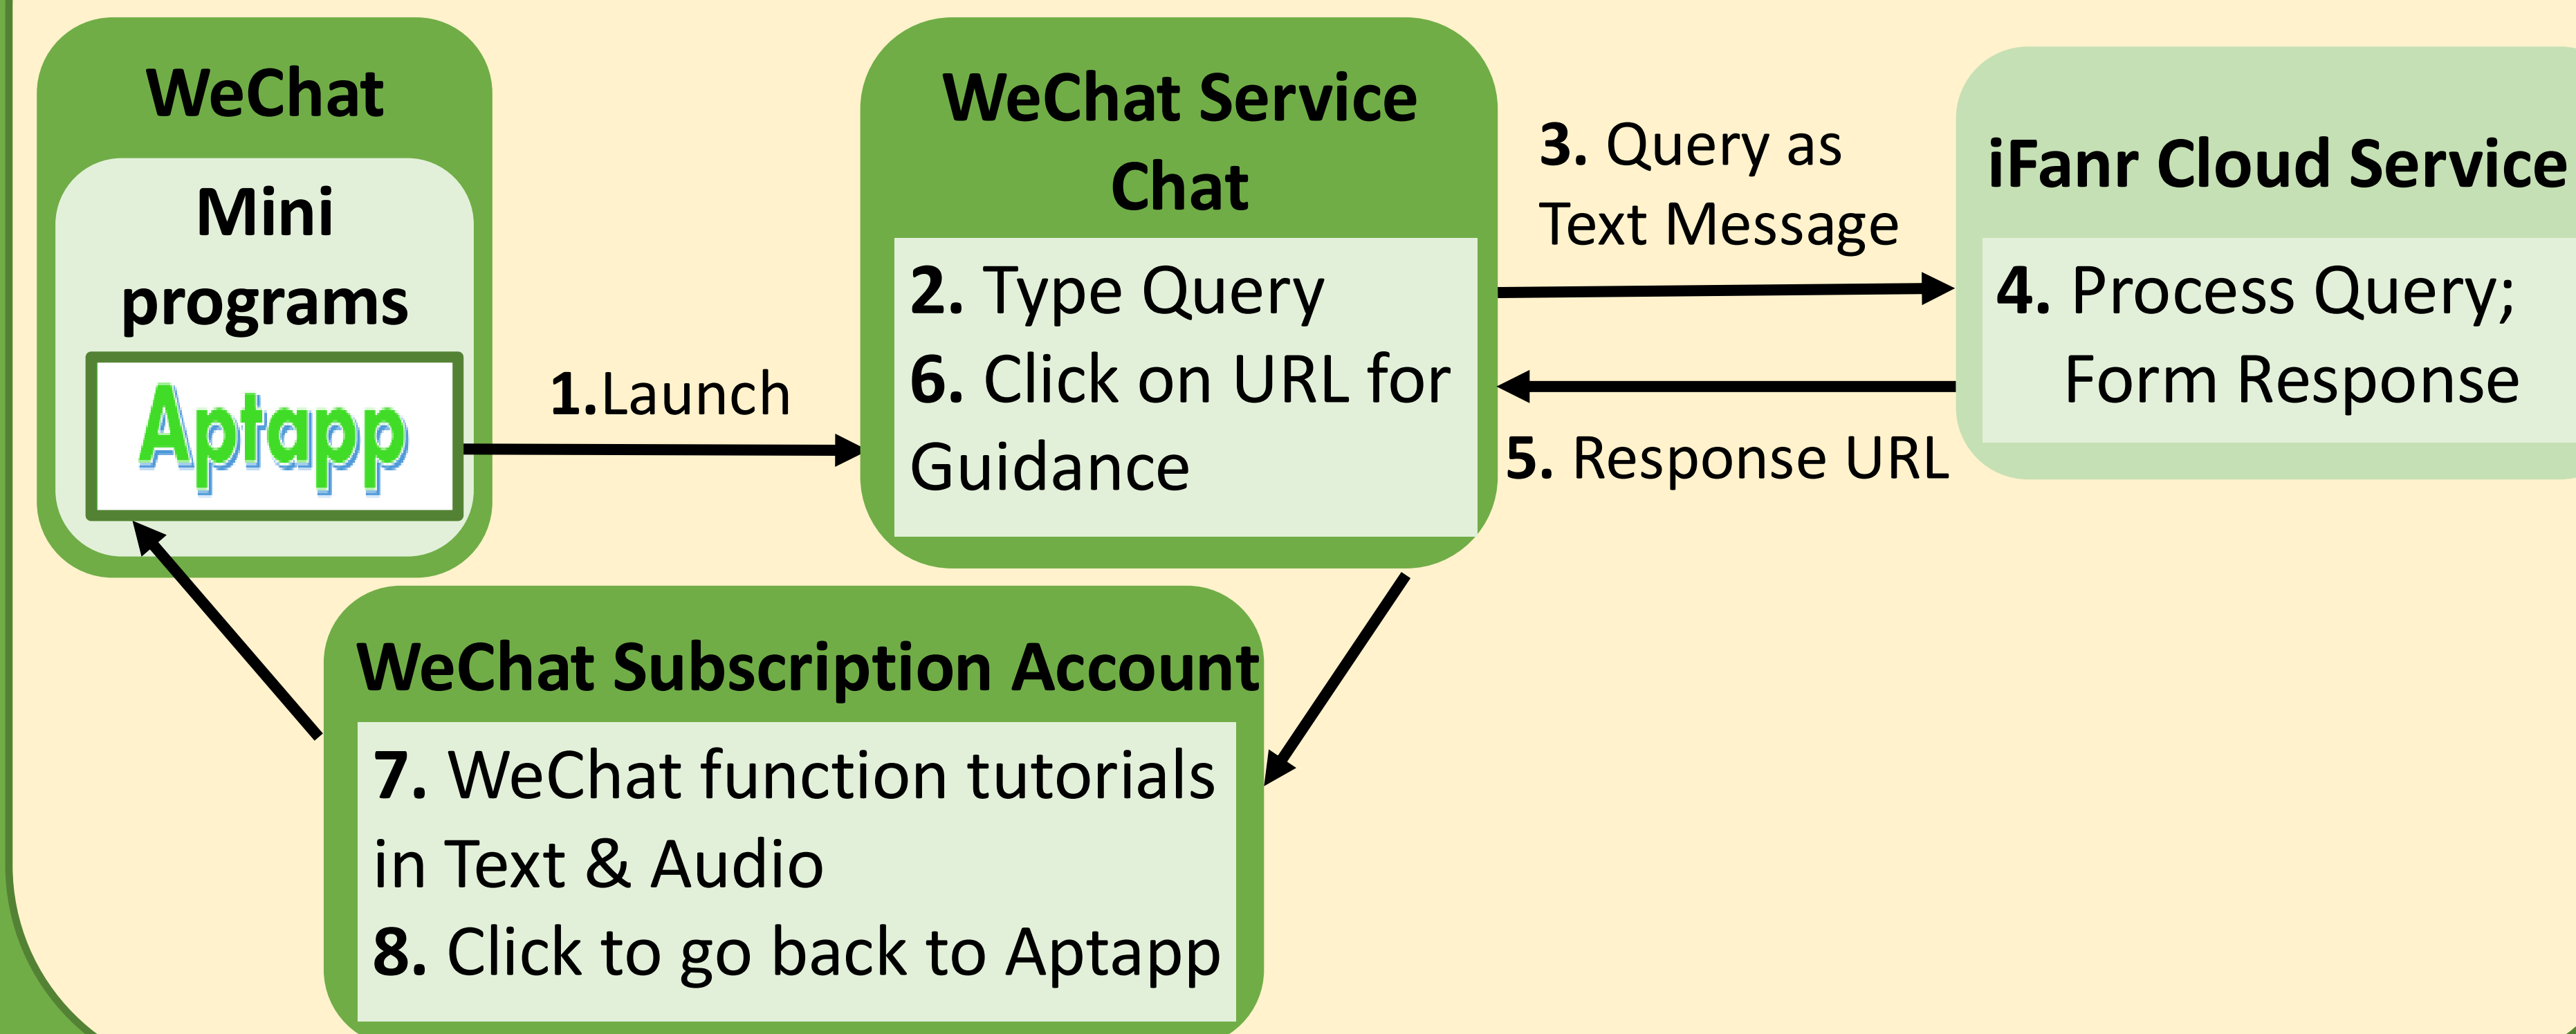

Faculty Mentor: Dr. Choong-Soo Lee
Department of Mathematics, Computer Science, and Statistics

Introduction:

- WeChat: the most widely-used, multi-function, super app in China.
- Its features include messaging, social media, mobile payments, city services, and sub-applications (mini-programs).
- Novice Users have less literacy in using technology.
- Aptapp provides guidance in an *easy and practical* way in order to help novice users with WeChat functionality.

Architecture:

Future Focus:

Reduce User Interaction:

- Eliminate Subscription Account (Web-pages)
- Move all tutorials into the mini-program, Aptapp itself.
- According to the updated WeChat features and mini-program API, user can set mini-programs into **Floating Windows**.

More Intelligent Respond System:

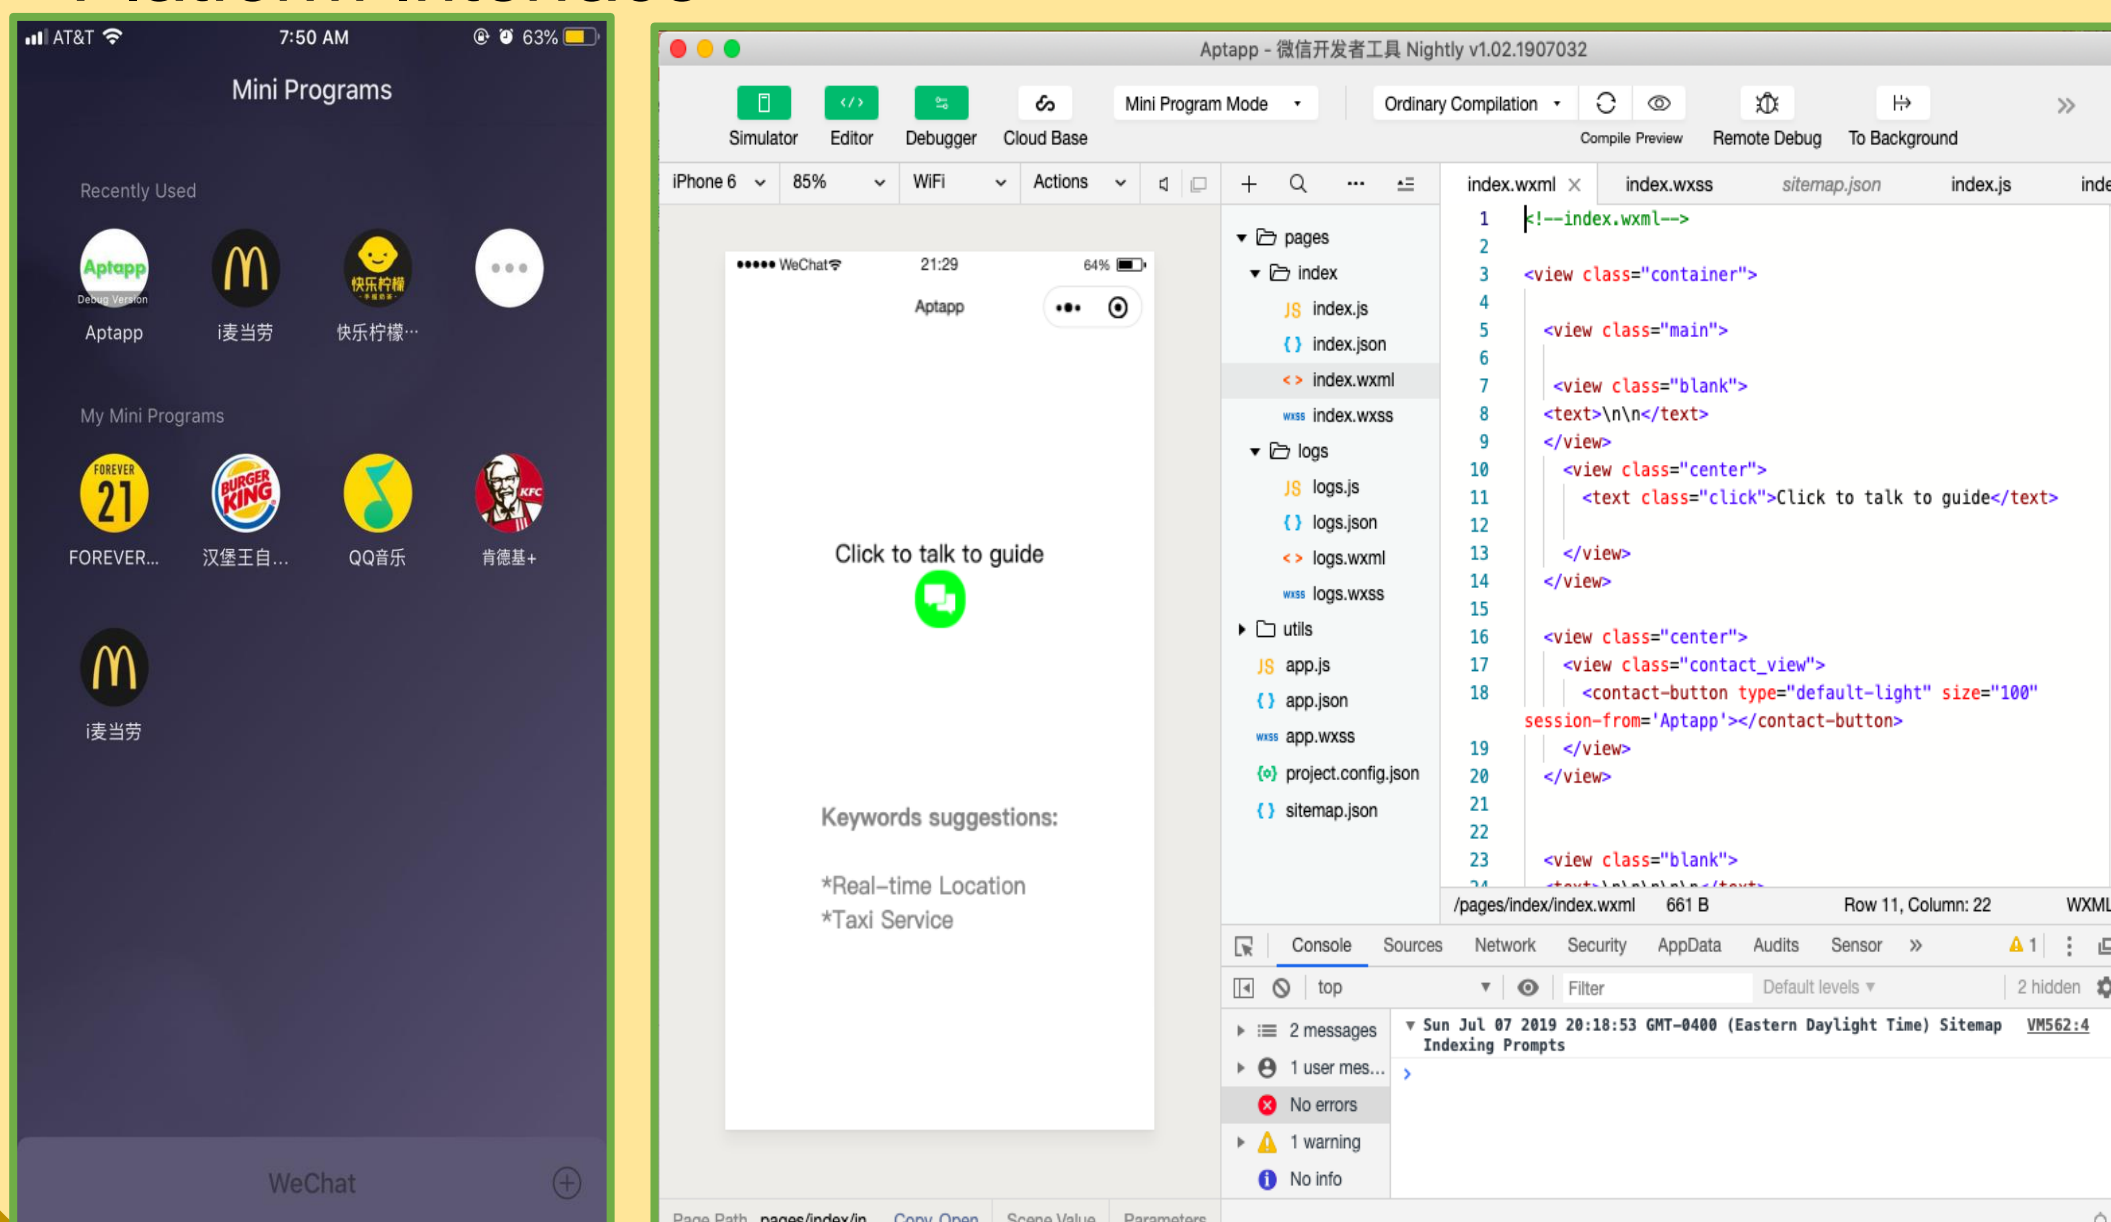

- *Natural Language Processing*: understand user's query intelligently. Available packages in JavaScript (e.g. Wink JS).
- *WeChat Cloud Service*: build cloud functions inside WeChat Dev Tool, allows package installation.

Underlying Technology/ Platform:

Mini-program:

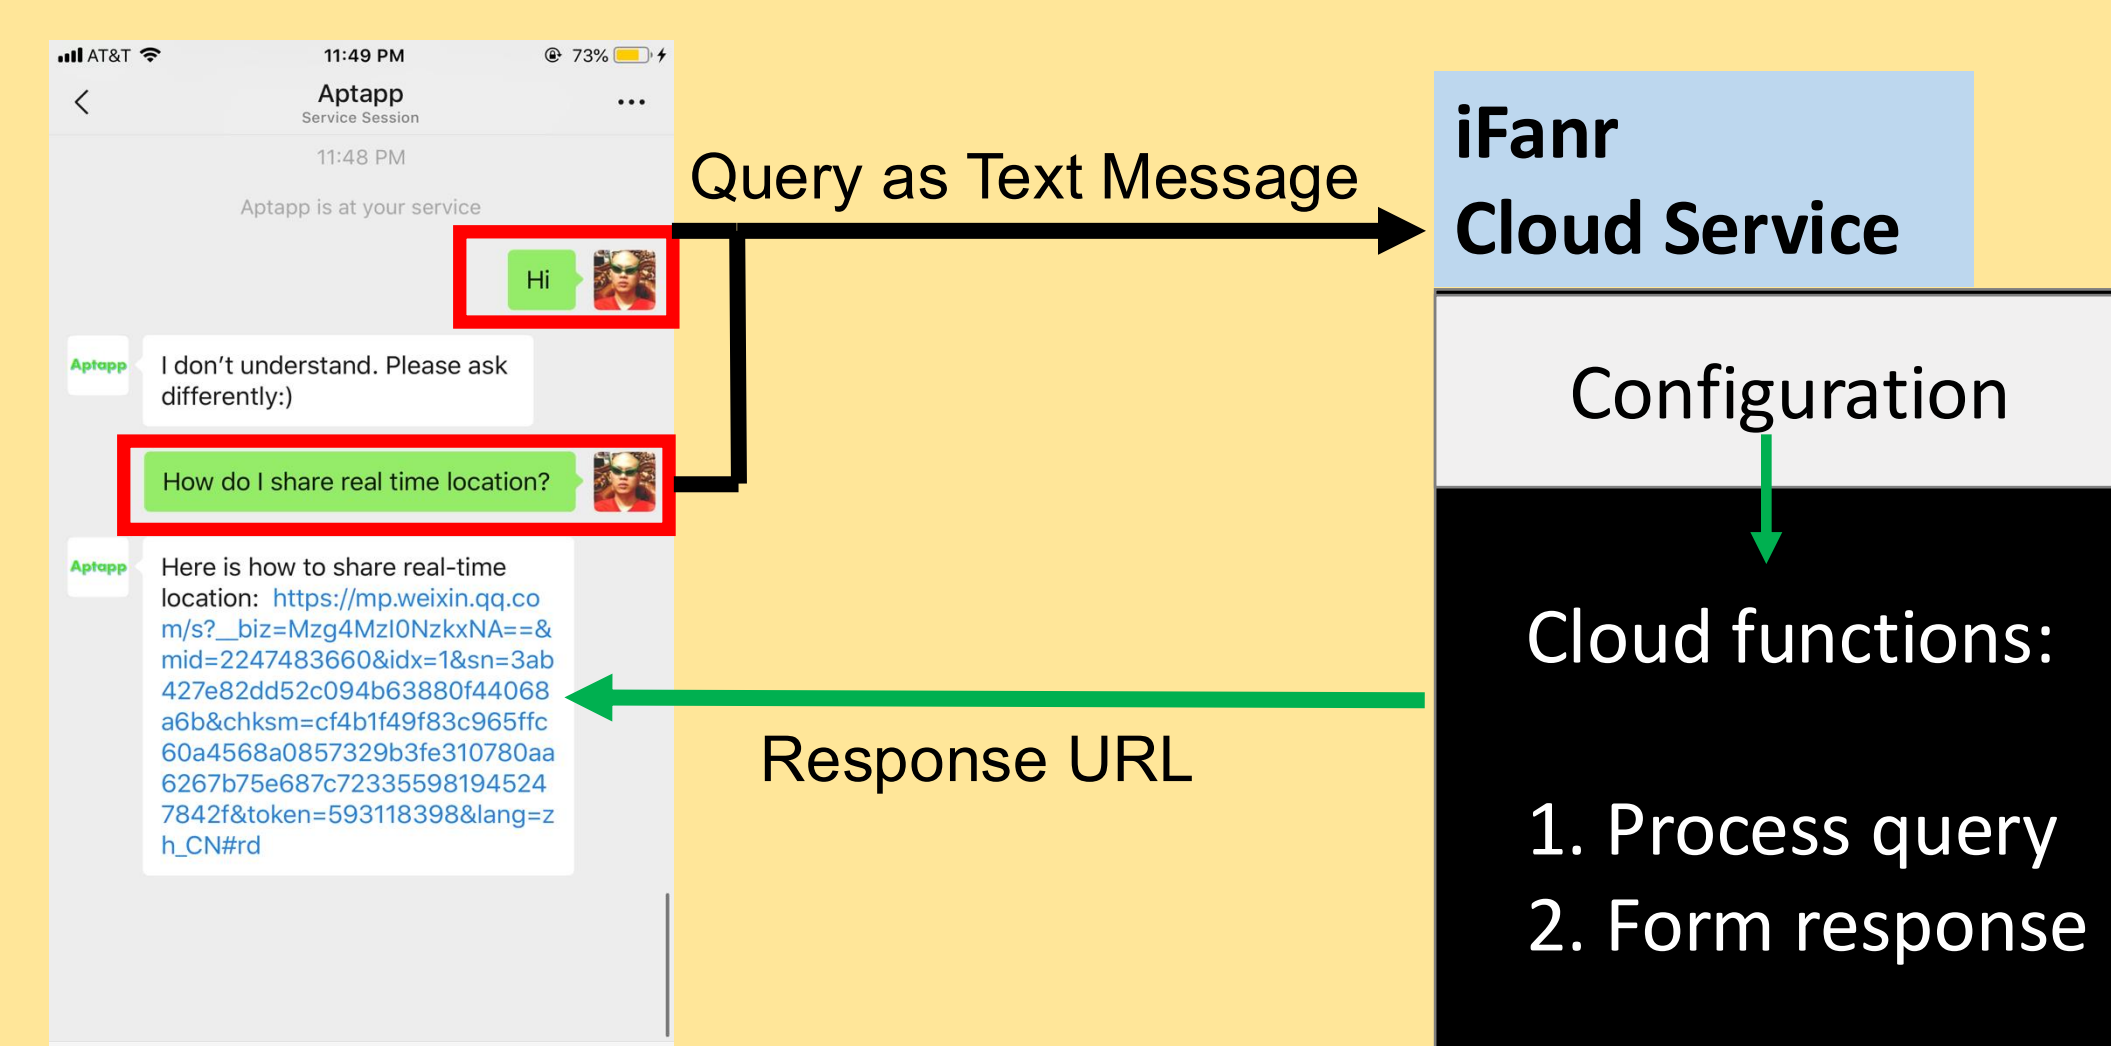

- The sub-application in *WeChat*, mostly used by e-commercials.
- Aptapp: one-page mini-program with a button component to launch Service-chat.
- WeChat Dev Tool: Mini-program development environment.
- Four files for one page:
 - WXML & WXSS: components setup and styling
 - JSON: overall configuration
 - JS: logical instructions in Javascript

*Mini-program Platform Interface WeChat Developer Tool

Service Chat & iFanr Cloud Service:

- Service Chat: triggered by a button. A *WeChat* chat window to interact with the *iFanr Cloud Service*.
- iFanr Cloud Service:
 - A third-party cloud service that allows developers to build cloud functions to respond to service chat interactions.
 - Configured to respond to "text" messages by triggering and calling a custom cloud function.

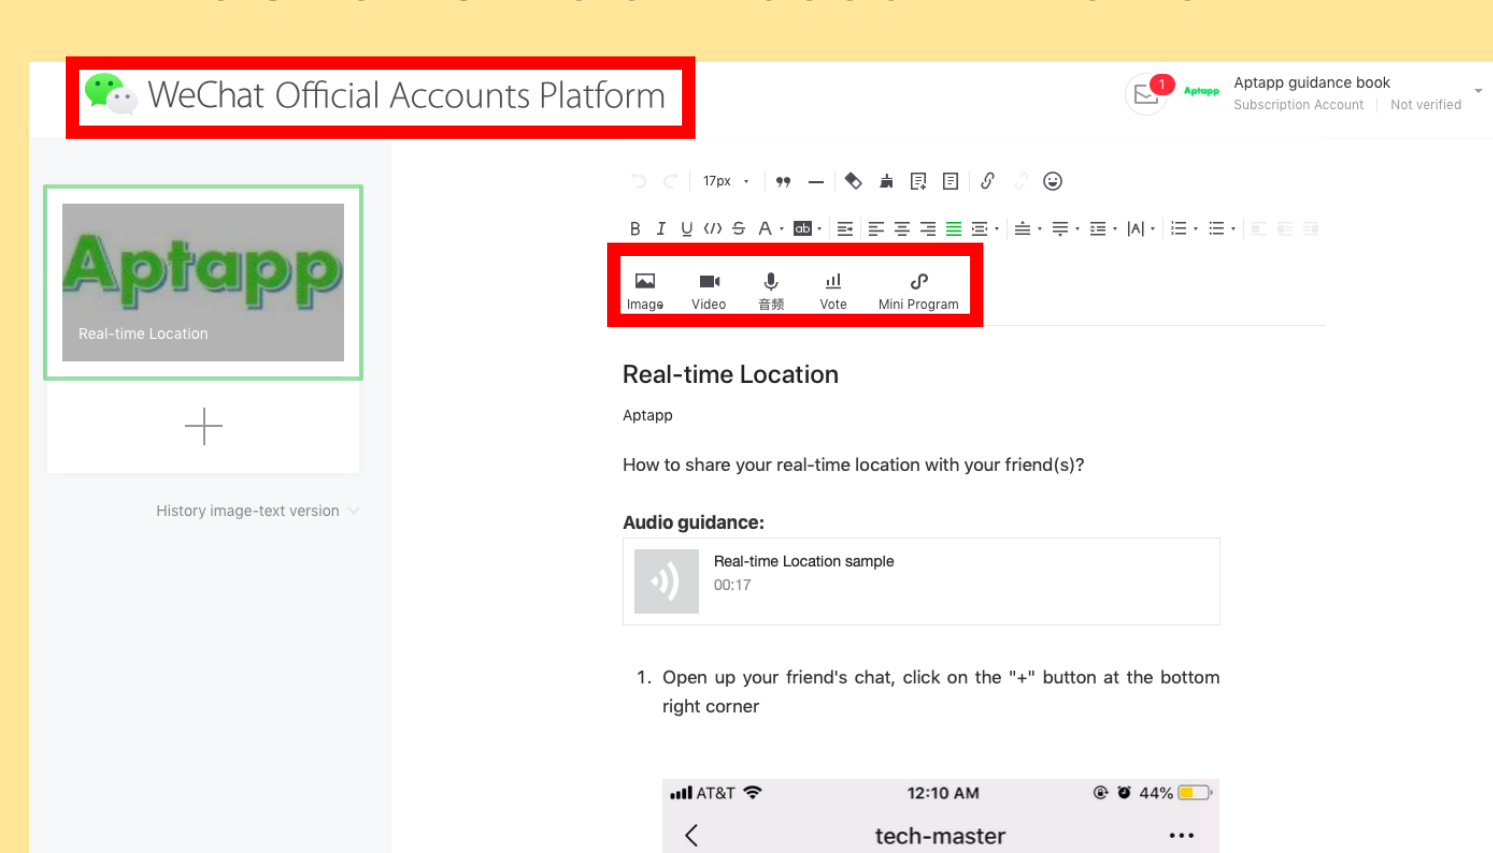

*Service Chat

Subscription Account:

- Customized web-pages.
- Tutorials are created under this platform. Allows audio, image, and link back to Aptapp(mini-program).
- Web-pages opened in *WeChat* can be minimized into **Floating Window**.
- Users can switch back to the tutorial any time while they are in *WeChat* through Floating Window.

*WeChat Official Account Platform
